PREFACE

This publication contains estimates of the Gross Domestic Product of Alberta and supplementary tables in current and constant dollars for the period 1965 to 1982. Quarterly data in current dollars are included for 1971 to 1982. Data for 1982 are preliminary, while the figures for 1971 to 1981 have been revised from the figures presented in previous publications. Annual figures for 1961 to 1965 and quarterly data for 1966 to 1970 are unchanged and are available in previously released publications or on CANSIM. Current dollar data are also available annually from 1951 to 1960 for the Consolidated Income and Outlay Accounts upon request.

Data on personal income by census division are presented in Table 17 for the first time in this publication. This table was previously released as part of "Personal Income by Census Division, Alberta, 1973-1980." This report contains details of the methodology used to estimate these data.

We wish to thank Statistics Canada personnel for their cooperation and assistance in providing data and in answering our many questions. We also wish to thank the various departments of the Government of Alberta for their assistance in providing us with data.

INTRODUCTION

ALBERTA ECONOMIC ACCOUNTS

THE ALBERTA ECONOMY IN 1982

The year 1982 was one of much slower growth for the Alberta economy than had been achieved in previous years. The growth rate for Gross Domestic Product (GDP) during the year was 6.6%, bringing the economy to a level of $52.2 billion. When measured in real terms after the effects of price changes were deleted, total economic production declined by 4.5%, dropping from $14.4 billion in 1981 to $13.8 billion in 1982.

In spite of declines in all but one of its components, the implicit price index for GDP actually increased at a faster rate in 1982 (11.6%) than in 1981 (8.9%). The lone sector accounting for this increase was exports, which comprises nearly half of current dollar GDP, and whose inflation rate jumped from 7.5% in 1981 to 13.5% in 1982 (largely a reflection of energy price increases).

On the outlay account, the component that showed the largest decline for the year was residential construction, which fell by 21.6% in current dollars (23.6% real). Of this total, single residential dwellings showed the biggest decline, dropping by over 50% for the year. On the other hand, apartment construction jumped by over 40% for the year.

Investment in new machinery and equipment showed the next biggest drop, falling by 9.5% in current dollars (17.0% real). This drop could almost be expected as 1981 saw the largest investment in new machinery ever, with a jump of 41.3%. Historically, large increases in this category in one year are followed by moderate increases or declines in growth rates the following year.

Other declines in activity during 1982 occurred in imports of goods and services and in non-residential construction, with the former falling by 10.0% (14.5% real) and the latter dropping by 0.3% (8.6% real).

All other components of the outlay account registered increases when measured in current dollars, with government expenditures having the highest rate at 16.3% (4.6% real). Exports also showed an increase for the year, climbing by 7.1%. However, after the effects of price increases were deleted, there was a decline of 5.6% in real terms for this category.

Personal expenditure grew by 9.6% overall in current dollars, but declined by 1.2% in real terms. The stronger components were expenditures on services, which grew by 14.3% (3.0% real), and on non-durables, which increased by 14.2% (1.4% real). These two categories include most of the so-called basic necessities such as food and rent. Many of the more expensive but less essential items, whose sales are the first to decline in periods of recession, tend to be included in expenditures on semi-durable goods, which increased by 2.7% in current dollars but declined by 3.3% in real terms; and in expenditures on durable goods, which declined by 7.4% (12.3% real).

In the income account, the largest drop was measured in farm income, which declined 27.9%, with corporation profits falling by almost the same rate registering a 23.4% drop. The biggest increase in income in 1982 was measured by non-farm unincorporated business with a jump of 16.1%.

Upon analyzing GDP by industry, it can be seen that some industries performed much better than others during the year. Those industries which registered a decline in current dollar production in 1982 included agriculture, manufacturing and mining, with agriculture having the largest decline at 6.2%. All other industries saw their output increase, with utilities having the highest rate at 19.7%. See Table 14 for further industrial details. This table presents data in current dollars only.

WHAT ARE ECONOMIC ACCOUNTS?

A commercial enterprise monitors its performance by a set of accounts, which record the details of the transactions in which it has participated over a period of time. Similarly, the economic performance of a region can be monitored by economic accounts, which record the aggregated transactions of all persons, businesses, governments and institutions.

Whenever a rigorous and comprehensive view of the economy is required, the economic accounts provide much useful information. In addition to presenting certain aggregate statistics of general interest (such as Gross Domestic Product, Personal Income, Personal Consumption), economic accounts may also be used for current economic analysis (monitoring the performance of the economy), short-term forecasting, analysis of the sources of economic growth, model-building (construction of econometric models), and structural analysis (composition of production by industry, composition of demand, or the role of the government sector in the economy). They are also useful for the formulation of public and private policy.

DEFINING PRODUCTION

Production is the creation of goods and services on which members of the community, or the community as a whole, set a dollar value. Any process that creates or adds value to already existing goods is production. For example, the activities of labourers and entrepreneurs who produce and sell the entire range of goods and services; the activities of doctors, lawyers, entertainers, dry cleaners and all who provide services to households and businesses; and the activities of government are all production. They, in various ways, create or improve goods and services, and hence add economic value. Also included in production is "income in kind" which refers to such items as the value of farm consumption and free lodging. Excluded are illegal activities and the sale of previously owned assets. However, the gain or profit in selling used assets is included in production.

THE STRUCTURAL FRAMEWORK OF THE ACCOUNTS

The basic framework of the Alberta Economic Accounts is similar to that of the National Income and Expenditure Accounts produced by Statistics Canada. The economic transactions of the province are grouped according to three major activities: production - output or cost; accumulation - saving and investment; and appropriation - income and outlay. The first item, production, is measured by valuing Gross Domestic Product (GDP) in both current and constant dollars. Accumulation is represented by showing the saving-investment relationship in the Consolidated Capital Finance Account. The flows of income and outlay between sectors are measured in the Sector Accounts.

MEASURING GROSS DOMESTIC PRODUCT IN CURRENT DOLLARS

Alberta's economic growth can be measured by Gross Domestic Product (GDP), which indicates the value of total production within the geographical boundaries of the province (Tables 1 and 2). This should not be confused with the provincial equivalent of the Gross National Product (GNP), often called the Gross Provincial Product, which would be the value of total production attributable to the residents of Alberta, regardless of where that production takes place. The GDP is a measure of economic activity and not a pure measure of economic well-being of the residents. It measures total income accruing to the factors of production (labour and capital) due to economic activity within the province; however, it does not indicate whether these incomes are being collected by the residents of Alberta. Thus, GDP at market prices plus investment income received from non-residents less investment income paid to non-residents equals GNP at market prices. Since estimates of investment income received from and paid to non-Albertan Canadians can not be calculated it is not possible to estimate provincial GNP at this time.

The Gross Domestic Product of Alberta has been measured by two methods. The first method is the Income Approach which sums the earnings of the factors of production plus capital consumption allowances plus indirect taxes less subsidies. This method focuses directly on the concept of value added. The value added at a given stage of the production process is calculated by subtracting the value of intermediate goods and services from the revenue arising from the production of goods and services at that stage. The difference so determined will be equal to the value, at that stage of the production process, of payments for labour, profits, depreciation and indirect taxes (such as federal sales tax) less subsidies received. When summed for the economy as a whole, these amounts provide an estimate of the GDP of Alberta (Table 2, Consolidated Income Account). Capital consumption allowances are used as a proxy for depreciation because depreciation cannot be measured directly.

The Consolidated Outlay Account (Table 2) illustrates measurement of the GDP by the second method, namely, the Expenditure Approach . This method sums the final purchases of goods and services by Albertans plus the value of physical change in inventories plus exports less imports. All production must eventually be sold, either for current consumption or for capital formation. Some commodities are sold several times as they pass through the production process, with each producer increasing

the dollar value of them. Thus, when they are sold to the ultimate consumer, their sales value should represent the total value that has been added during production. An estimate of total production can be obtained by summing these total final sales (including exports), adding inventory changes, and subtracting amounts paid for imports to remove the amount of value added before they entered Alberta.

Theoretically, these two methods should produce the same result, however, for statistical reasons they do not. The difference between the two methods is reflected in the Residual which is more fully explained in the "Definition of Terms" section at the back of this publication.

MEASURING GROSS DOMESTIC PRODUCT IN CONSTANT DOLLARS

Total product or value added (that is, production of finished goods and services) can be separated into a quantity component (the number of units of various commodities) and a price component. The price applied to the goods and services can either be the current market price, or the market price which prevailed in some earlier year. If base-year prices are used to measure production for each year, then production is said to be measured in "constant" dollars. Measuring production in this way removes the component of growth that is due to price changes, leaving a measure of "real" economic growth.

Annual estimates of GDP in constant dollars are presented in Table 3. Quarterly deflators are unavailable at this time.

The basic method used to calculate constant dollar GDP is to deflate each of the components of the expenditure side by its corresponding price index. This process is carried out in two different stages. The period 1961 to 1970 is deflated using 1961 as a time base, while 1971 to the current year uses 1971 as a base. The first period is then arithmetically converted to the 1971 base. The reasons for using this method are twofold. Firstly, this is the methodology used in the National Accounts. Using the same methodology facilitates comparisons between Alberta and Canada. Secondly, prices obtained for the period 1961 to 1970 are weighted differently than post-1971 prices. Therefore, deflation using the 1961 base for these years will retain the constant dollar changes and implicit price changes for this period. Rebasing of the 1961 to 1970 period is done at published levels. In cases where rebased constant dollar components are aggregated to rebased published totals, some discrepancies occur. These are shown in the constant dollar tables as the "Adjusting Entries."

SAVING AND INVESTMENT

The Consolidated Capital Finance Account (Table 5) shows the relationships between saving and investment. Provincial saving and non-resident saving represent the sources of financing Gross Domestic Capital Formation. Provincial saving equals Gross Provincial Product at Market Prices less Personal and Government Current Expenditures on Goods and Services. Non-resident saving or dissaving is measured by the deficit or surplus of Alberta on current transactions with non-residents. Gross Domestic Capital Formation is calculated by summing Gross Fixed Capital Formation and the Value of Physical Change in Inventories.

METHODOLOGICAL REVISIONS

Changes to the series presented in these accounts occur whenever new sources of data or revised data series become available; or when new methods of estimation are developed that provide more accurate results. In this set of accounts, changes have been made to most series back to 1976 as a result of revised figures released by Statistics Canada earlier this year.

Further methodological revisions were made to the non-resident sector that resulted in increases in data series for exports and imports back to 1971. The method to calculate exports of grains has been completely revised and new estimates have been made for imports of fruits and vegetables. These revisions raised both the current and constant dollar series. Another major change to the methodology was the inclusion of quarterly industrial detail to deflate exports and imports of manufactured goods which resulted in an increase in the constant dollar series. The net effect of these methodological revisions and revised data series resulted in increasing exports by over $400 million in 1981 and imports by over $600 million. The overall effect diminished the further back the revisions were carried out.

The rent components of sales to persons were raised by over $300 million in 1981 to incorporate data from the 1981 Census. Further changes were made back to 1971 for this series due to changes in occupied housing stock figures and a change in the method of estimation. Minor changes were also made to personal expenditure estimates as a result of using actual data received from the Alberta Liquor Control Board on the sale of alcoholic beverages, and including quarterly figures in the estimates of net expenditure abroad.

PERSONAL INCOME BY CENSUS DIVISION

A new table has been included in this edition of the economic accounts which presents estimates of personal income by census division for the period 1973 to 1981 (see Table 17). This table replaces the separate report that presented census division estimates in 1979 and 1980. Although we estimate personal income at the census division level, it is not possible to estimate GDP for census divisions since there are numerous components which do not have sub-provincial data available.

Briefly, the methodology used to calculate the figures in this table was to allocate each of the components of personal income to census divisions using data obtained from Alberta personal income tax tapes. There is an eighteen month lag in receiving these data so that estimates are only available up to 1981 for this report.

While only the totals for personal income are presented, data on its components are available. These data as well as further details on the methodology (which is published in the 1979 and 1980 Personal Income by Census Division reports) are available upon request.

SECTOR ACCOUNTS

As opposed to the production and accumulation measures described above, which represent the total values of production for Alberta, the

concept of presenting sector accounts is to show the flows of income and outlay between the various sectors of the economy. Thus, the key difference between sector tables and the consolidated tables is that the sector tables show transfers of income and expenditure between sectors. These transfers do not necessarily represent production, however, they show the redistribution of wealth. (See the Definition of Terms section on Current Transfers). The sectors are defined as follows:

The Personal Sector comprises the transactions of all individuals, unincorporated businesses and private non-profit organizations resident in Alberta.

The Government Sector includes the transactions of all government departments and agencies at the federal, provincial and municipal levels. Government enterprises which are profit oriented are included in the business sector. The government sector has included hospitals since 1961. A separate table has been constructed for the federal government and shows only those transactions which take place between the federal government and the other major sectors in Alberta. It should be noted that the government sector tables do not necessarily reflect the incidence of the fiscal policies of the respective levels of government but rather their economic transactions as they relate to economic accounting practices.

The Business Sector consists of all corporate and government business enterprises resident in Alberta. Problems arise due to the presence of multi-provincial corporations, however, a concerted effort has been made to resolve difficulties in this area using available data on an establishment basis.

The Non-Resident Sector for Alberta includes the transactions of goods and services between residents of Alberta and all persons, governments and business enterprises located outside the province.

DEFINITION OF TERMS

DEFINITION OF TERMS USED IN THE ALBERTA ECONOMIC ACCOUNTS

Introduction

This section provides a short definition or explanation of terms which appear in the accounts. Additional detail can be obtained from either the U.N. System of National Accounts or the National Income and Expenditure Accounts (NIEA) of Canada. Both sources are identified below.

The following abbreviations are used in this section:

1. NIEA — Dominion Bureau of Statistics. National Income and Expenditure Accounts, 1926-1956 Ottawa: Queen's Printer, 1962. Cat. No. 13-502.

2. NIEA, Vol. 1 — Statistics Canada. National Income and Expenditure Accounts, Volume 1 (The Annual Estimates, 1926-1974). Ottawa: Information Canada, 1976. Cat. No. 13-531.

3. NIEA, Vol. 2 — Statistics Canada. National Income and Expenditure Accounts, Volume 2 (The Quarterly Estimates, 1947-1974). Ottawa: Information Canada, 1976. Cat. No. 13-533.

4. NIEA, Vol. 3 — Statistics Canada. National Income and Expenditure Accounts, Volume 3 (A Guide to the National Income and Expenditure Accounts, Definitions - Concepts - Sources - Methods). Ottawa: Information Canada, 1975. Cat. No. 13-549E.

5. S.C. — Statistics Canada. When followed by a number, it refers to a specific Statistics Canada catalogue.

6. SNA — United Nations. A System of National Accounts. Studies in Methods, Series F No. 2 Rev. 3. New York: United Nations, 1968.

ADJUSTMENT ON GRAIN TRANSACTIONS

The Canadian Wheat Board (CWB) makes payments to producers in the current year on crops delivered in previous years. Since the Income Account is a measure of the earnings arising out of current production rather than actual cash receipts, adjustments have to be made. A second portion of this adjustment "allows for the fact that the earnings of the CWB are calculated on the basis of change in book values of inventories, whereas the required valuation of inventories for the Accounts is the value of physical change." (NIEA, Page 148). Negative values occur when CWB payments to farmers in the current year are higher than the actual value of grain produced in the current year. That is, payments have been made for grain delivered in previous years.

CAPITAL ASSISTANCE

An expenditure item of the federal and provincial governments, capital assistance consists of grants to incorporated and unincorporated businesses with the aim of assisting construction of new facilities or the acquisition of new production machinery and equipment.

CAPITAL CONSUMPTION ALLOWANCES AND MISCELLANEOUS VALUATION ADJUSTMENTS

Applicable to both government and business, this item has two components which are at present not completely separable: (1) an allowance for consumption of fixed capital (depreciation allowance) in the economy, and (2) various valuation adjustments arising from differences in the concepts of income and capital consumption as reflected in business accounting records and the corresponding concepts used in the National Accounts. The item is adjusted by adding capital outlays charged to current expense plus the claim portion of business and residential insurance and subtracting non-capital outlays charged to the capital account.

CORPORATION PROFITS

This component in the accounts is calculated before deduction of income and excess profits taxes, depletion allowances, and charitable donations, and before payments of dividends to non-residents. Due to the complexity of this item, a complete description and derivation of corporate profits can be found in NIEA, Vol. 3, Chapter 7.

CURRENT TRANSFERS

Current transfers are defined as "transfers of income between transactors. The transfers are made from the current income of the payer and add to the current income of the recipient for such purposes as consumption expenditure." (SNA, Page 231). The main distinction between a transfer payment and the purchase of a good or service is that "there is no direct link between the payments and the services received" in the case of the transfer payment. (SNA, Page 105).

CURRENT TRANSFERS TO BUSINESS FROM PERSONS

This is the non-productive or transfer portion of interest on the consumer debt. It is equal to total interest on the consumer debt less the administrative portion.

CURRENT TRANSFERS TO GOVERNMENT FROM PERSONS

Transfers to Government include "Direct Taxes" and "Other Current Transfers to Government." See the relevant headings for further explanation of these terms.

CURRENT TRANSFERS TO NON-RESIDENTS FROM PERSONS

This includes personal remittances to non-resident governments, corporations, and persons.

CURRENT TRANSFERS TO PERSONS FROM BUSINESS

Payments classified under this heading refer to charitable and other contributions from corporations to persons and unincorporated business and to bad debt allowances, that is "the amounts charged by businesses in respect to doubtful accounts, net of recoveries." (NIEA, Page 113.)

CURRENT TRANSFERS TO PERSONS FROM GOVERNMENT

An expenditure of the federal, provincial and local governments, these transfers encompass all direct payments from governments to persons. Included in this component are such items as family and youth allowances, unemployment insurance benefits, workers' compensation benefits, general welfare payments, old age security benefits, Canada Pension Plan benefits, and public service pension benefits.

CURRENT TRANSFERS TO PERSONS FROM NON-RESIDENTS

This refers to items such as pensions paid by foreign governments, cash payments by relatives or friends living in other countries, charitable and other contributions made by non-resident corporations.

DEPRECIATION

Depreciation is the actual wear and tear and obsolescence of fixed capital assets in the process of economic production.

DIRECT TAXES - BUSINESS ENTERPRISES

This item encompasses three components: general income taxes, mining and logging taxes and other direct taxes. These taxes are levied on profits as opposed to taxes on capital, on place of business or on sales, which are indirect taxes. These taxes are levied against private and government business enterprises and are collected by the federal and provincial governments.

DIRECT TAXES - NON-RESIDENTS

These are taxes levied by the federal government on payments to non-residents of such items as dividends, interest, royalties, management fees, etc.

DIRECT TAXES - PERSONS

This component encompasses such items as personal income taxes, employer and employee contributions to social insurance programmes, employer and employee contributions to non-trusteed public service pension plans, and employer and employee contributions to the Canada Pension Plan. Direct taxes are mainly levies assessed against individuals that take some account of ability to pay and are collected by both the federal and provincial governments.

EXPORTS AND IMPORTS OF GOODS AND SERVICES

Exports of goods and services include receipts from exports of merchandise, freight and shipping credits earned, travel expenditures of non-residents in Alberta, and other earnings, especially receipts from business services rendered to non-residents. Imports of goods and services include payments for imports of merchandise, freight and shipping charges incurred, travel expenditures of Albertans in the rest of Canada and abroad, and other payments, especially payments for business services rendered by non-residents. To date it has not been possible to include Alberta transactions in freight and shipping, and business services with the rest of Canada. Therefore only those transactions with the rest of the world are included in these categories.

FACTOR COST

Gross Domestic Product at Factor Cost is a measure of income accruing to the factors of production (land, labour and capital). It does not include income that accrues to the non-factor or invisible components of GDP (see Market Prices). Thus GDP at Factor Cost is derived from GDP at Market Prices by subtracting Indirect Taxes less Subsidies, plus Residual.

GROSS DOMESTIC PRODUCT (GDP) IN CONSTANT DOLLARS

This is a measure of total production during a given time frame and a given geographical location which is valued in prices for some base year. For Alberta, the base year used is 1971.

GROSS DOMESTIC PRODUCT (GDP) IN CURRENT DOLLARS

This refers to the value of total production within a given geographical area for a specific time period, and is measured in prices which prevail during the period being valued. It includes output that is produced by capital stock which is owned by non-residents of the region, but it does not include income received by residents on production which takes place outside the region. Thus GDP is strictly a measure of production within a specific region, regardless of ownership of the factors of production.

GROSS FIXED CAPITAL FORMATION

Government and business gross fixed capital formation is defined to include expenditures of government and business for new construction and new machinery and equipment. Expenditures of persons for new residential dwellings are also included, since individuals, in their capacity as home-owners, are treated as business enterprises. Only new construction and new machinery and equipment are included; purchases of land, used buildings, and second-hand machinery and equipment are excluded since they do not represent current production of goods and services.

GROSS NATIONAL (PROVINCIAL) PRODUCT (GNP)

As opposed to GDP, this item measures the total value of production attributable to the residents of a given region during a particular time frame, regardless of where that production takes place. Thus, GNP at Market Prices equals GDP at Market Prices plus Investment Income received from non-residents less Investment Income paid to non-residents.

GROSS CAPITAL STOCK

Gross stocks are the cumulative value of gross investment in capital goods less cumulative discards.

IMPLICIT PRICE INDEXES

These are currently - weighted price indexes which measure yearly changes in prices as well as changes in expenditure patterns between items. They are calculated by dividing the current dollar values of the components of Gross Domestic Product by their deflated constant dollar series.

INDIRECT TAXES

These are taxes levied by the federal, provincial and local governments. Indirect taxes represent a part of the market price of goods and services which is not received by factors of production. They are imposed on the production and/or sale of goods and services or they may be levied in accordance with formulae which take account of certain capital holdings (e.g. real property). They may also take the form of charges for the right to engage in certain activities of a personal, professional, industrial or commercial nature. Indirect Taxes include such components as manufacturers' sales tax (federal), retail sales taxes (provincial), customs duties, excise duties and taxes (including oil export charges), natural resource taxes, real property taxes, amusement taxes and profits of liquor boards. Indirect Taxes, however, exclude the sales of oil and gas rights.

INTEREST AND MISCELLANEOUS INVESTMENT INCOME

This component includes bond interest, mortgage interest, bank interest, royalties, investment income of life insurance companies, etc. This item is closely linked with investment income of persons, investment income of governments and interest on the public debt. The nature of these linkages is fully explained in NIEA, Vol. 3, Chapter 7.

INTEREST, DIVIDENDS AND MISCELLANEOUS INVESTMENT INCOME OF PERSONS

This category is a measure of the interest income of persons. It includes bank, mortgage and bond interest, both paid and imputed. It also includes royalties received by persons and dividends received on canadian bond holdings. It does not include interest on the public debt nor interest on the consumer debt. In addition to the above, the investment income of life insurance companies and fraternal organizations is included in the figures. The series takes into account both interest and dividends received from the corporate and government business enterprise sector as well as the non-resident sector of the accounts.

INTEREST ON THE PUBLIC DEBT

This is an expenditure item of all levels of government and hospitals. It encompasses all payments made by governments in respect of their borrowed funds.

INVENTORY VALUATION ADJUSTMENT

The inventory valuation adjustment is the difference between the value of physical change in inventory and the change in inventory book value. This adjustment is made to remove, from corporation profits and the net income of unincorporated business, any unrealized gains or losses arising from the effect of price changes on holding of inventories. Since the method of calculating farm income automatically eliminates such gains or losses, this adjustment is required only for business inventories and grain in commercial channels other than the Canadian Wheat Board.

INVESTMENT INCOME (GOVERNMENT)

A revenue source for the federal, provincial and local governments and hospitals, investment income includes such items as interest on government-held public funds, interest on loans, advances and other investments, royalties and remittances from government enterprises.

MARKET PRICES

Gross Domestic Product at Market Prices is a concept that measures total production based on the earnings of the factors of production (Factor Cost) plus the non-factor costs of production (Indirect Taxes less Subsidies). GDP at Market Prices also includes an indirect measure of depreciation called Capital Consumption Allowances. Since this is a measure of production, it does not include transfer payments (see Current Transfers).

MID-YEAR NET CAPITAL STOCKS

Mid-year net capital stocks are net stocks adjusted to the middle of each year. Net stocks are gross stocks less deductions of losses in value through physical deterioration and obsolescence.

MILITARY PAY AND ALLOWANCES

This includes wages and salaries paid to members of the armed forces as well as supplementary payments such as employer contributions to pension funds. The value of uniforms, free medical examinations, and food supplied to personnel is included for years prior to 1966. The value of the provision of barracks to personnel is not included.

MISCELLANEOUS INVESTMENT INCOME FROM NON-RESIDENTS

Miscellaneous investment income from non-residents includes dividend, interest and business service payments to Alberta businesses. Business service payments include rent, royalties, advertising, research, insurance and management fees. For the provincial accounts there should be two components for payments from non-residents: payments from non-Canadians and payments from Canadians but non-Albertans. Because the data for interprovincial payments are not available at present, the component "payments from Canadians but non-Albertans" is not estimated.

NET INCOME OF NON-FARM UNINCORPORATED BUSINESS INCLUDING RENT

"This item includes the net income of all non-farm unincorporated businesses covering almost every industry in the economy including the net income of independent professional practitioners such as doctors, dentists, nurses, lawyers and engineers." (NIEA, Page 116). It also includes the rental incomes of persons.

NET INCOME RECEIVED BY FARM OPERATORS FROM FARM PRODUCTION

This item shows cash receipts from the sale of farm products, the imputed value of goods consumed by farm families, supplementary farm payments, the value of inventory changes and the value of operating and depreciation charges (except depreciation on residential dwellings). Negative values occur when the value of depletion of inventories and operating expenses exceeds cash receipts and supplementary payments.

OIL EXPORT TAX/CHARGE

In October 1973, the federal government imposed a tax on the export of crude oil under the Oil Export Tax Act. This Act was in effect until April 1, 1974. Provisions were made within the Act to make payments to the exporting provinces of 50 per cent of tax revenues derived from the export tax. The share of each province was based on a production formula. As of April 1, 1974, the tax became a charge on the export of crude oil and certain petroleum products. under the Petroleum Administration Act. Under this Act, no payments were made to the exporting provinces. The oil export tax/charge is included in federal government revenue as an indirect tax.

OTHER CURRENT TRANSFERS FROM PERSONS TO GOVERNMENT

A revenue item for the federal, provincial and local governments, these transfers involve direct remittances from persons to government. They are similar to direct taxes, however, the transfer items are not necessarily related to ability to pay. They also involve less compulsion and greater freedom of choice than direct taxes. Included in this

component are such items as motor vehicle licenses and permits (personal purposes only), contributions to hospital and medical care insurance, game licenses, marriage licenses and fines and penalties.

PAYMENTS TO NON-RESIDENTS

Payments to non-residents include dividend, interest and business service payments. Business service payments include rent, royalities, advertising, insurance, research and management fees. As explained in the item Miscellaneous Investment Income from Non-Residents, only the Payments to Non-Canadians component is estimated. Net payments to Canadians but non-Albertans is derived residually.

PERSONAL DISPOSABLE INCOME

This equals personal income minus direct taxes and other current transfers to government by persons.

PERSONAL INCOME

This is a measure of all income received by Albertans. It includes: wages, salaries and supplementary labour income; military pay and allowances; net income of non-farm unincorporated business; net income received by farm operators from farm production (excluding the adjustment on grain transactions); interest, dividends, and miscellaneous investment income; and all transfer payments received by persons.

PERSONAL SAVINGS

Savings include the value of physical change in farm inventories and the value of personal (non-farm) savings. They also include the change in book value of unincorporated business inventories.

PURCHASES OF GOODS AND SERVICES BY CONSUMERS

(a) FROM BUSINESS:

This item includes personal expenditure on durable, semi-durable and non-durable goods and services. Purchases of homes are not included as they are considered to be business fixed capital formation. Personal expenditure also includes operating expenses of private non-commercial institutions (e.g. universities) and operating costs of insurance companies.

(b) FROM NON-RESIDENTS:

The estimates for this category include travel and military personnel expenditure abroad as well as travel expenditures in the rest of Canada. This item is included under the category of Services in Table 15.

(c) FROM PERSONS:

This shows purchases of direct labour services by persons (i.e. wages and salaries of domestic servants and employees of private non-commercial institutions).

Personal consumer expenditure can also be broken down into the following categories:

(i) DURABLE GOODS

This item refers to goods obtained by persons which have an expected long life-time of use and involve a substantial sum of money to purchase. It includes items such as automobiles, recreation equipment and appliances.

(ii) NON-DURABLE GOODS

These are "goods with an expected life-time of less than one year." (SNA, Page 235).

(iii) SEMI-DURABLE GOODS

These are goods which can be used for a period of time of a year or more and do not involve large sums of money to purchase. It includes items such as clothing, footwear, linens and kitchenware.

(iv) SERVICES

This item covers personal expenditure on a broad variety of services ranging from rent paid and imputed on dwellings to transportation, recreation and personal care services.

PURCHASES OF GOODS AND SERVICES BY GOVERNMENT

This component consists of the outlays of the federal, provincial and local governments and hospitals for goods and services. It includes general administrative expenses, such as wages and salaries, as well as outlays for goods and other services required in discharging governmental responsibilities. Thus, it consists of purchases from businesses and non-residents, wages and salaries of government employees, medical care expenditures, capital consumption allowances and other miscellaneous outlays.

RESIDUAL

The final estimate of Gross Domestic Product of each year is taken as the average of the statistical totals of the consolidated income account and the outlay account. That is, the difference between these two independently estimated totals (the residual) is divided into two halves. To produce an arithmetical balance between the two totals, one half of the residual is added to the lower estimate, and one half is subtracted from the higher estimate. The residual, therefore, reflects net Alberta receipts in business services, and freight and shipping transactions with the rest of Canada, as well as flaws in estimation procedures, and discrepancies in the timing with which the income and outlay data are recorded. The persistently positive (or negative) residuals on one side of the accounts may suggest that there is a

systematic, built-in, bias in the estimates and/or a persistent deficit (or surplus) in freight and shipping, and in business services transactions with the rest of Canada. Unfortunately, it is at present not possible to identify the sources of bias with any degree of certainty.

SALES TO PERSONS

Sales to Persons is a measure of the value of goods and services consumed by the personal sector on a domestic basis. These figures differ from total Personal Expenditure on Consumer Goods and Services in Table 15 by excluding purchases made abroad.

SUBSIDIES

An expenditure item of the federal and provincial governments, subsidies represent payments made by governments to business toward current costs of production, whether this be at the producer or distributor level. Subsidies may be made pertaining to agriculture (i.e. Canadian Dairy Commission Payments), transportation (i.e. payments to railways under the National Transportation Act), and communications, among others.

SUPPLEMENTARY LABOUR INCOME

This covers payments made by employers on the behalf of employees and can be considered as payment for the services of employees. It includes employers' contributions to unemployment insurance, welfare funds and workers' compensation.

TRANSFERS FROM/TO OTHER LEVELS OF GOVERNMENT

Substantial transfers take place within the government sector as a result of intergovernmental agreements. The various transfers are identified below:

(a) From federal to provincial governments - includes such items as amounts for equalization, hospitalization, medical-care, post-secondary education and regional economic expansion;

(b) From federal to local governments - very small since federal assistance to local governments is usually channelled through provincial governments;

(c) From provincial to local governments - includes transfers to local school boards and to other local government entities;

(d) From provincial government to hospitals;

(e) From local to provincial governments - relates to contributions to shared-cost programmes;

UNDISTRIBUTED CORPORATION PROFITS

Undistributed corporation profits is the residual after deducting, from coporation profits before taxes, corporation income tax, dividends paid to non-residents, dividends paid to Canadian residents and current

transfers to persons.

VALUE ADDED

The value added by an industry is the difference between the gross value of production of that industry less the total value of purchases (including imports) of goods and services from other firms which enter into that industrys' production process (i.e. the intermediate goods and services). If we sum the value added figures for all industries in Alberta, we would calculate GDP by Industry. This method is not used in these accounts.

VALUE OF PHYSICAL CHANGE IN INVENTORIES

Value of physical change in inventories is defined as the change in the value of farm and non-farm business inventories (change in physical volume) valued at the average market prices of the period. It is necessary that the net change of business holdings of inventories during the year be included in the Gross Domestic Product to allow for that portion of current production which has not yet been sold (positive change in inventories), or to eliminate that portion of previous year's production which is included in sales of current year (negative change in inventories).

WAGES AND SALARIES

This refers to direct payments other than pensions made to employees. It is calculated before deductions are made for contributions to social security, taxes and so on. It also includes income in kind, such as free lodging. Retroactive payments are included in the period of payment rather than in the period of earning.
